Greater Delhi Area, India

PROFESSIONAL SUMMARY

B.Tech Information Technology student with hands-on experience in Python, Data Science, Machine Learning and Data Analytics gained through structured summer training and multiple practical projects. Skilled in preprocessing real datasets, training and evaluating regression, classification and clustering models, and presenting results through dashboards. Contributing to BHOOMI-AI, a Smart India Hackathon 2026 project. Seeking Data Science / ML / AI / Data Analyst internship and fresher opportunities.

TECHNICAL SKILLS

Programming: Python, SQL, C++

Data Science & ML: NumPy, Pandas, Scikit-learn, Machine Learning, EDA, Data Cleaning, Feature Engineering, Regression, Classification, Clustering, Random Forest, Decision Tree, KNN, K-Means, ANN, Model Evaluation

Data Analytics & Visualization: Power BI, Matplotlib, Seaborn, Streamlit

Tools & Platforms: Jupyter Notebook, VS Code, Git, GitHub

TRAINING

Data Science Summer Training | ADGIPS

- Completed hands-on training in **Python, data analysis, EDA** and data visualization (Matplotlib, Seaborn, Power BI), and in ML algorithms for regression, classification and clustering.
- Applied the concepts to multiple practical projects on real datasets, covering data cleaning, feature engineering, model training and evaluation using Jupyter Notebook, Streamlit and Git/GitHub.

SELECTED PROJECTS

Smart City Analytics Suite | Python, Pandas, NumPy, Scikit-learn, Streamlit GitHub

- Developed a multi-module analytics application applying ML to urban problems, including **traffic management, crime hotspot analysis, air quality prediction and waste management.**
- Preprocessed datasets, prepared features and trained **Random Forest** and **K-Means** models to generate predictions and cluster-based insights.
- Visualized outputs and presented results through an interactive **Streamlit** dashboard; managed code with Git/GitHub.

BHOOMI-AI: Land Acquisition Intelligence Platform | Python, ML *Smart India Hackathon 2026*

- Contributing to an AI system that identifies land-acquisition projects likely to be delayed, explains risk factors and supports government officials in taking preventive action.
- Prepared and analyzed project datasets and developed **ML-based delay prediction and risk-scoring** functionality.
- Collaborating with teammates to integrate ML outputs into the wider application.

Car Price Prediction | Python, Pandas, Scikit-learn GitHub

- Built a **Random Forest Regression** model to predict used-car prices, including data cleaning, feature encoding and evaluation on held-out test data.

Credit Card Fraud Prediction | Python, ANN GitHub

- Implemented an **Artificial Neural Network** classifier to detect fraudulent transactions, covering data preprocessing, model training and performance evaluation.

Additional ML Projects | Python, Pandas, Scikit-learn GitHub

- **Breast Cancer Prediction** (KNN classification), **Heart Disease Prediction** (Decision Tree classification) and **House Price Prediction** (Decision Tree regression): end-to-end notebooks from preprocessing to model evaluation.

EDUCATION

B.Tech, Information Technology *2024 – 2028 (Expected)*

Dr. Akhilesh Das Gupta Institute of Professional Studies (ADGIPS) | Guru Gobind Singh Indraprastha University (GGSIPU), Delhi | Currently in 5th Semester
